Local Anesthesia In
Dentistry Clinical

There are two local
anesthetic agents used in
dentistry that reportedly
induce methemoglobinemia.
The first agent is the
topical local anesthetic
benzocaine and the second

(PDF) Local anesthetics in dental practice
Local anaesthetics are usually given by dentists, surgeons, anaesthetists, GPs and other doctors. Some medications containing mild local anaesthetic are also available on prescription or over the counter from pharmacies. Depending on what they're being used for, local anaesthetics can be given as injections, creams, gels, sprays or ointments.

Local anaesthesia - NHS

Though local anesthetics are safe and effective, considerable research is ongoing to make them even more effective. Computer-controlled local anesthetic delivery systems (C-CLAD) and buffered local anesthetic solutions promise to allow painless injections to be delivered to dental patients almost anywhere in the oral cavity.
