decades, but in truth their historical tradition as a whole owes a great debt to Arabic scholarship. The first systematic translation activity ever organized was under the Abbasids in Baghdad in the 9th Century CE, and Arabic domination continued for several centuries before the tide turned. In this collection, the importance of the ongoing translation and terminology movement in the Arab world is revealed through the works of some of the most distinguished scholars, who investigate a wide range of relevant topics from the making of the first ever Arabic

English medical terms. This study manipulated the use of Chinese medical terms in a simulated clinical consultation, to investigate its effects on patients' comprehension of medical information and their confidence for seeking further information. One hundred and eighty one eligible Hong Kong laypersons were randomly assigned to watch one of three video clips, which differed in the use of words explaining the underlying pathological changes and the treatment of prolapsed intervertebral disc: one with lay terms only (group 1), another with medical

Terms alone (group 2), and another one with medical terms supplemented with lay terms (group 3). After that, a computer-based questionnaire was used to assess the participants' comprehension of the information and confidence for seeking further information, followed by a semi-structured face-to-face interview on their perceptions of the utility of Chinese medical terms. Results suggested that although Chinese medical terms were perceived to be useful in assisting patients to look for further information on their diseases, the use of Chinese
