Solution Let $2n$ be the first even integer and let $2n + 2$ be the second integer $2n + 2n + 2 = 26$ $4n + 2 =$
 26 $4n + 2 - 2 = 26 - 2$ $4n = 24$ $n = 6$ So the first even integer is $2n = 2 \times 6 = 12$ and the second is $12 + 2$

In algebra, a quadratic equation (from the Latin quadratus for "square") is any equation that can be rearranged in standard form as $ax^2+bx+c=0$ where x represents an unknown, and a , b , and c represent known numbers, where $a \neq 0$. If $a = 0$, then the equation is linear, not quadratic, as there is no ax^2 term.

You will be hard-pressed to find one single area of mathematics that is taught after algebra in which algebra is not practiced in almost every situation. The most general and the most commonly used definition of algebra is the study of mathematical symbols as well as the study of the manipulation of these symbols. Mathematical symbols are one of the most basic elements of mathematics, aside from numbers themselves and operation symbols, so the study of these symbols is one of the most important studies that one can take up as far as mathematics is concerned. To that end, in this book, you will find some of the most important topics regarding algebra. These include but are not limited to the following: understanding integers and basic operations, inequalities and one-step operations; fractions and factors; the main rules of arithmetic; linear equations in the coordinate plane, expressions, equations and functions; real numbers; solving linear equations; visualizing linear functions, linear equations, linear inequalities, systems of linear equations and inequalities; exponents and exponential function; polynomials, quadratic equations, radical expression, radical equations, rational expressions; and finally, intermediate topics in algebra.
